

User Handbook
Workspace Compliance System

Introduction:

The Workspace Compliance System is a structured platform designed to facilitate compliance reporting between users and their respective Reviewing Officers (RO). The system operates on two reporting cycles—weekly and monthly—ensuring that compliance requirements are consistently met.

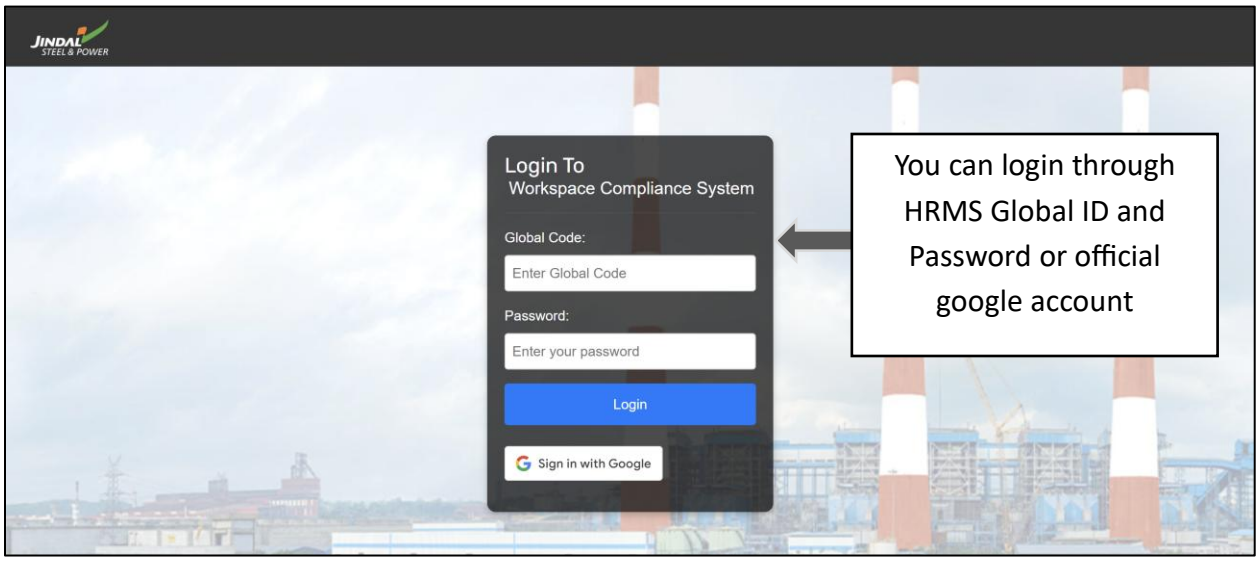

As part of the weekly process, users must submit a Self Acknowledgment GPS411 to their RO. The RO then reviews the submission and updates the status with one of the following responses: Accepted, Send Back, or Non-Compliance. If the acknowledgment is sent back, the user is required to make the necessary updates based on the RO's comments and resubmit the request by updating its status from Pending to Declared.

This system ensures an organized and transparent workflow, promoting efficiency and accountability in workplace compliance management.

Step by step process to use workspace compliance system:

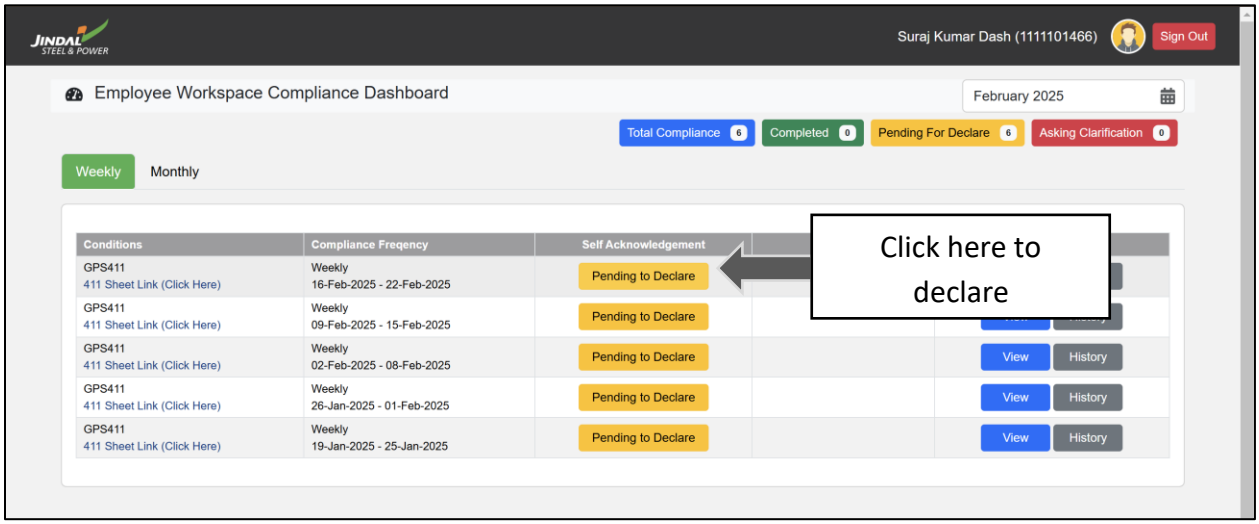

USER MODULE

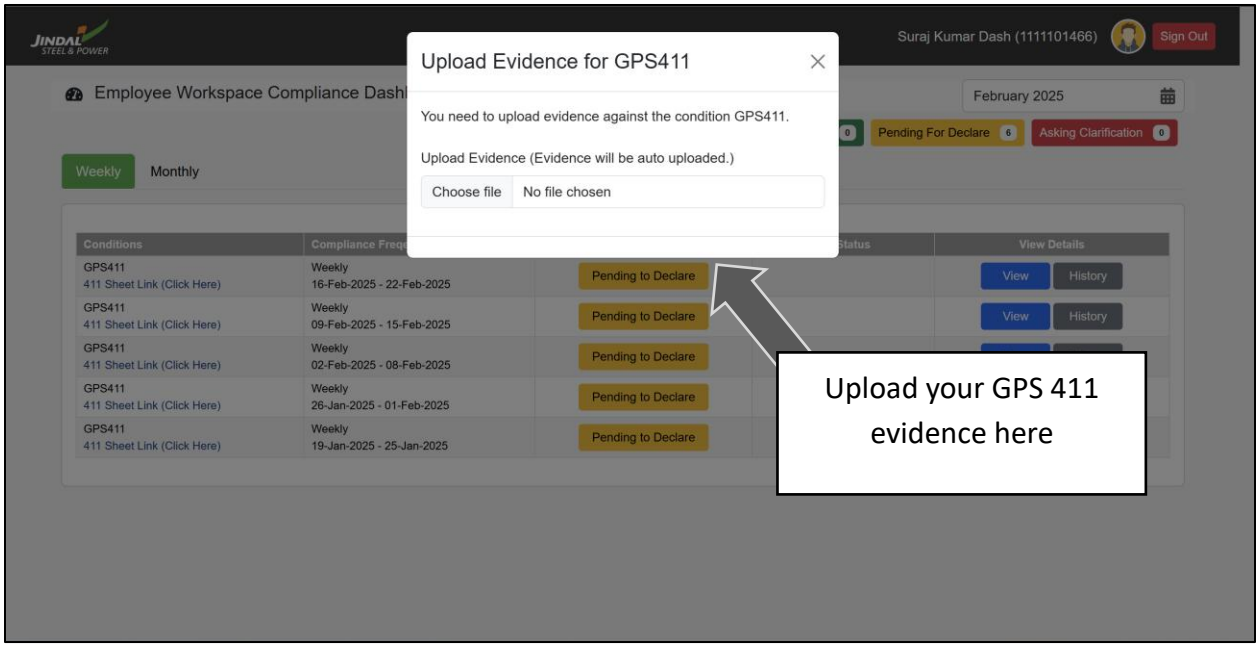

Login:

Dashboard

User can see weekly view and monthly view.

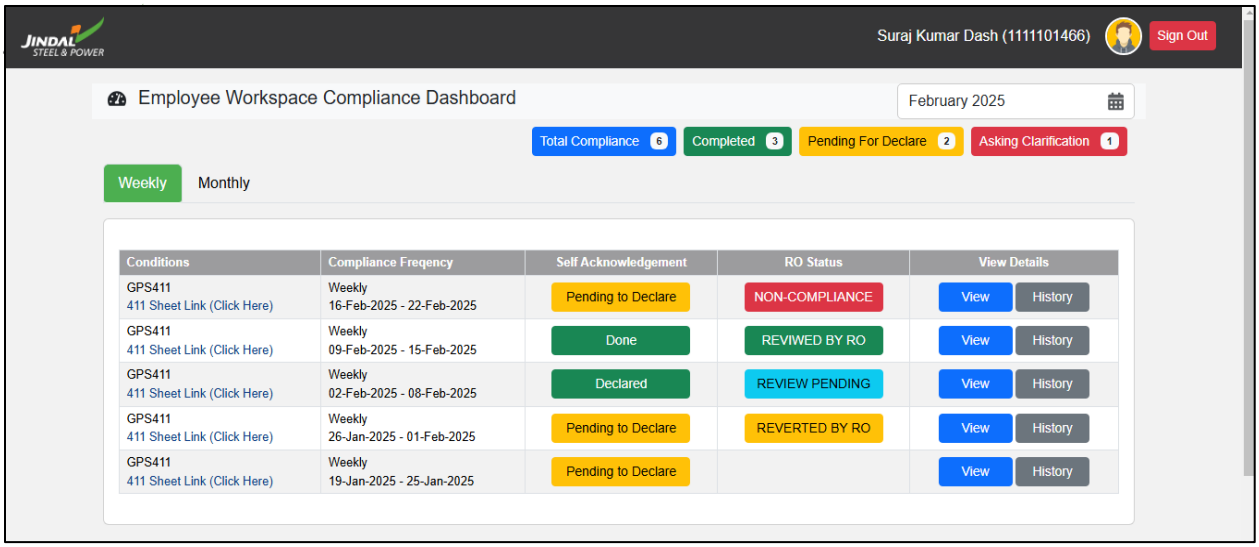

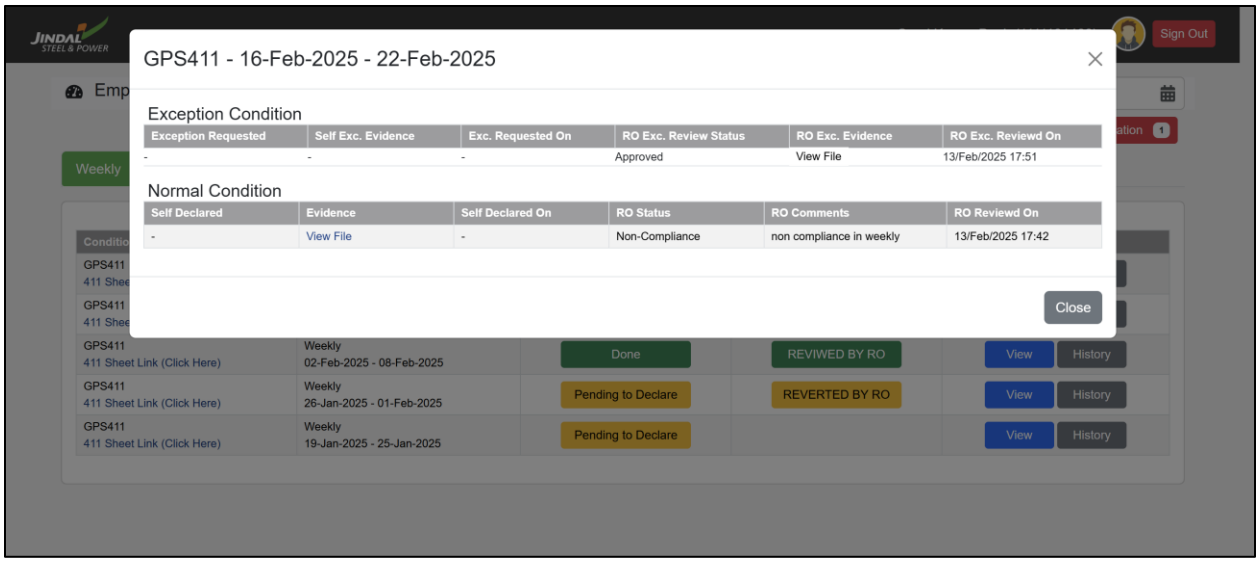

After uploading the file, the **Self Acknowledgment** status will get updated from **Pending to Declare** to **Declared**. The RO will then review and update the status as follows:

- **Approved** → Self Acknowledgment status changes to **Done**, and RO status updates to **Reviewed by RO**.
- **Send Back** → Self Acknowledgment reverts to **Pending to Declare**, and RO status updates to **Reverted by RO**.
- **Non-Compliance** → Self Acknowledgment status changes to **Done**, and RO status updates to **Non-Compliance**.

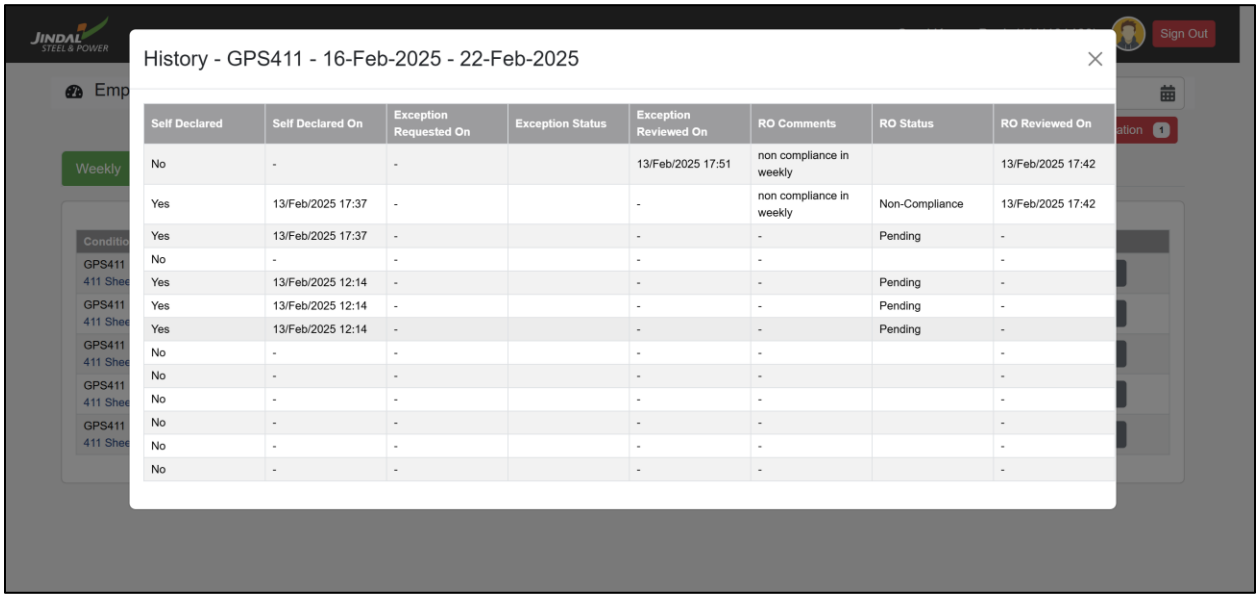

Note: All the status sync happens twice a day i.e. 1PM and 9PM every day

RO MODULE:

Dashboard:

RO can do the self-Review and Team Review on the basis of weekly and monthly. The Self Acknowledgment column is updated when the user manually changes the status from Pending to Declared, and the uploaded files are reflected in the Evidence column. The RO can then review the submission, update the status, and provide comments by selecting Approved, Send Back, Non-Compliance.

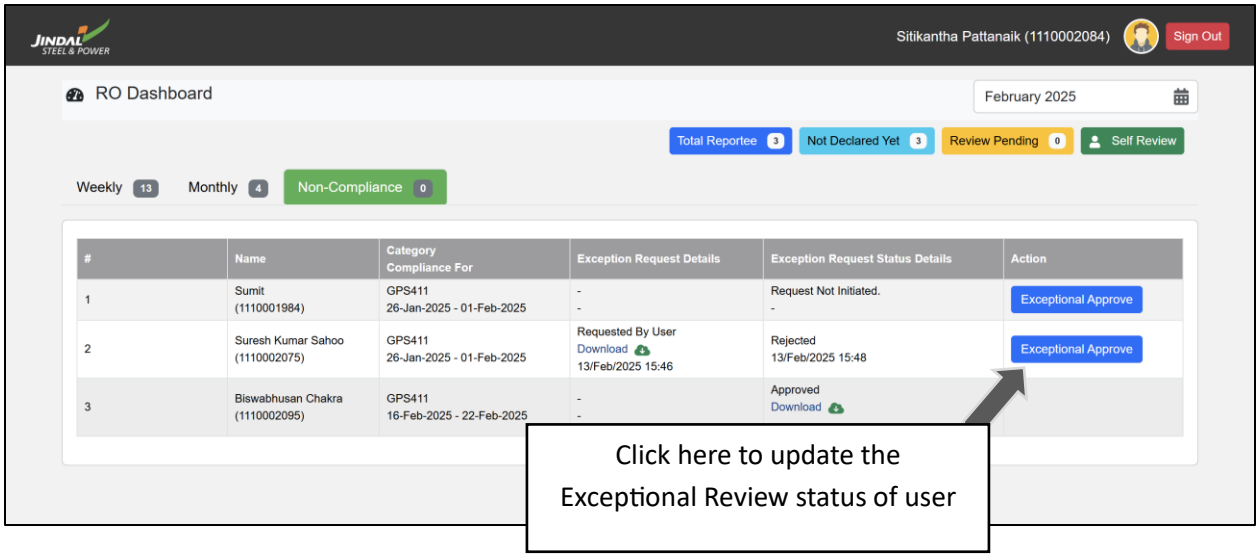

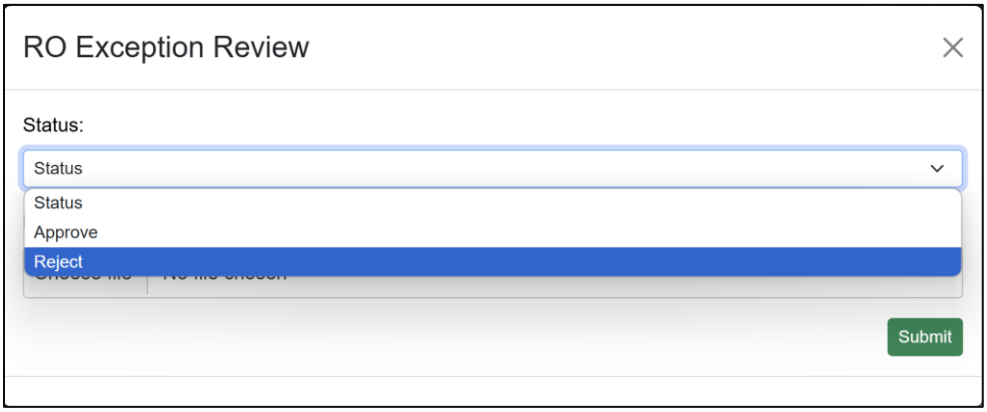

RO can update the status with Reviewed or Send Back or Non-Compliance based on their Declaration.

Non-Compliance:

When the RO selects Non-Compliance as the status, it updates the User RO Status to “Non-Compliance” and the Self Acknowledgment to “Request”. The RO can then either approve or reject the request.

RO can either Approve the Exception or Reject the Exception.
